**Specialization and domain of interest**

<b>Title and abstract of the doctoral thesis (within 150 words)</b>
<p style="text-align: center;"><b>Time Deduction in Islamic Economy</b></p> <p>The most important thing that distinguishes the temporal deduction from usury, and what distinguishes the increase in the price of selling the counterpart from the increase in the usury and the usurious interest is represented in the fundamental difference that lies in each, more precisely: in the nature of the two exchanges that are the subject of the process, selling: exchanging two different things, That is, the two alternatives are different - money for food - and usury is the exchange of two similar things e.g., a dinar for a dinar. So, the difference of the two alternatives that</p>

allows the exchange to be beneficial to both parties. Also, the fact that the increase in sale is compelled by the benefit of exchange, while the increase in the loan is a debt without an economic benefit that corresponds to it, and therefore it is illicit. With this distinction, of ambiguities in the increase in the loan and the economic value of time was eliminated. The theory has an impact on Islamic banking through its adherence to controls and criteria for time deduction in relation to: procrastination of customer, early customer payment, and discounting commercial paper. One of the most prominent effects of the theory is its impact on the study of investment, as - based on the idea of time preference - future cash flows are discounted at a proposed discount rate away from the interest rate, to reach the present value.
